

Data Processing & Privacy Assessment Submission

Company: DigitalCart Technologies Ltd.

Industry: E-commerce / Digital Commerce

Operating Region: European Union

Assessment Type: GDPR Compliance Assessment

1. Company Overview

DigitalCart Technologies Ltd. operates an online e-commerce platform through its website and mobile applications. Customers can create accounts, browse products, place orders, make payments, and receive personalised product recommendations.

The company operates primarily in EU member states and has approximately 180 employees.

DigitalCart acts as the controller for personal data collected through its website and mobile applications.

2. Customer Account Information

When a customer creates an account, the following information is collected:

- Full name
- Email address
- Telephone number
- Date of birth
- Gender
- Billing address
- Shipping address
- Account username

- Password

Customers are required to provide their name, email address, telephone number, billing address and shipping address. Date of birth and gender are collected during account registration.

3. Order and Transaction Information

When a customer places an order, the following information is recorded:

- Customer ID
- Products purchased
- Quantity
- Order value
- Date and time of purchase
- Shipping address
- Billing address
- Payment method
- Order status
- Refund information

The company does not directly store complete credit/debit card numbers. Payment transactions are processed through an external payment service provider.

4. Website Behaviour

DigitalCart records customer interactions with its website and mobile application. The following information may be collected:

- Pages visited
- Products viewed
- Search queries
- Time spent on pages
- Products added to cart
- Products removed from cart
- Abandoned carts
- Clicks on advertisements

- Product categories viewed
- Login timestamps
- Device information
- IP address
- Browser information

This information is associated with the customer's account where the customer is logged in.

5. Customer Profiling

DigitalCart maintains a customer profile for registered users. The profile is generated using information such as:

- Purchase history
- Purchase frequency
- Average order value
- Products viewed
- Product categories viewed
- Search behaviour
- Cart activity
- Website interaction frequency

The company uses automated software to assign customers to marketing segments. Examples of segments include:

- High-value customers
- Regular customers
- Occasional customers
- Low-engagement customers

These segments are used to personalise product recommendations and promotional communications.

6. Product Recommendations

DigitalCart uses automated algorithms to recommend products to customers. Recommendations may be based on:

- Previous purchases
- Products viewed
- Search history
- Similar products purchased by other customers
- Customer profile information

The recommendation system operates automatically without manual review of individual recommendations.

7. Marketing

DigitalCart sends promotional communications through:

- Email
- SMS
- Push notifications

Customers may receive personalised promotions based on their customer profile. Customers can unsubscribe from promotional email communications through an unsubscribe link contained in marketing emails. SMS communications can be disabled through the customer's account settings.

8. Data Retention

DigitalCart retains customer information for one year after the customer's last interaction with the platform. The retention period currently applies to:

- Account information
- Purchase history
- Browsing history
- Search history
- Customer profiles
- Marketing segmentation information
- Product recommendation information

After the retention period expires, the company intends to delete the customer's information from its primary production databases. Backup systems may retain historical copies for longer periods.

9. Data Sharing

DigitalCart uses several external service providers. These include:

- **Payment Provider:** Used for processing customer payments.
- **Cloud Infrastructure Provider:** Used for hosting application servers and databases.
- **Email Provider:** Used to deliver transactional and marketing emails.
- **Analytics Provider:** Used to analyse website usage and customer behaviour.
- **Marketing Platform:** Used to manage customer segmentation and promotional campaigns.

Customer information is shared with these providers where required for their respective services.

10. Employee Access

Approximately 25 employees have access to customer information as part of their job responsibilities. Employees include personnel from:

- Customer support
- Finance
- Operations
- Marketing
- IT
- Data analytics

Database administrators have access to the production database. Customer support employees can access customer account and order information through an internal customer management system. Marketing employees can access customer segmentation information.

11. Security

The company currently implements the following security controls:

- HTTPS/TLS
- Password hashing
- Username/password authentication
- Role-based application access
- Firewall protection
- Database backups
- Multi-factor authentication for administrators
- Production environment access restrictions
- Annual penetration testing

The primary production database is hosted in a cloud environment.

12. International Processing

Some of the company's technology and service providers operate infrastructure outside the European Economic Area. The company may therefore transfer or allow access to customer information from locations outside the EEA. The company maintains contractual agreements with its service providers.

13. Customer Requests

Customers can contact the company through: **privacy@digitalcart.example**

Customers may use this channel to request information concerning their personal data. The company manually processes these requests through its privacy and customer-support teams. The company currently does not provide a dedicated automated privacy portal.

14. Privacy Notice

14. Privacy Notice

Customers are provided with a privacy notice when creating an account.

The notice describes:

- Information collected
- General purposes of processing
- Use of cookies
- Marketing communications
- Customer rights
- Contact information for privacy-related requests

The privacy notice is available through the website.

15. Automated Systems

DigitalCart uses automated systems for:

- Product recommendations
- Customer segmentation
- Marketing personalisation
- Fraud detection
- Customer analytics

The customer segmentation system operates automatically using historical customer behaviour.

16. Data Subject Rights

DigitalCart provides mechanisms for customers to:

- Request access to their information
- Request correction of inaccurate information
- Request deletion of their account
- Opt out of marketing communications

Requests are handled manually by the customer-support/privacy team.

17. Requested Assessment

DigitalCart Technologies Ltd. would like its GDPR compliance position assessed based on the processing activities described above.

The company would like the assessment to cover:

- GDPR compliance
- Applicable GDPR principles
- Lawful basis for processing
- Data retention
- Data minimisation
- Profiling
- Automated decision-making
- Transparency requirements
- Data subject rights
- Security requirements
- Processor relationships
- International data transfers
- DPIA requirements
- Required documentation
- Recommended remediation actions
